iOS Developer

Passionate about technology and video games from an early age, I pursued the IT path until I chose university, where I am still studying to become a Computer Engineer. I am interested in the world of privacy and open source.

Work experience

M47 Labs - QA Automation engineer | August 2023 - Present

Madrid, ES

After the Apple Developer Academy I joined M47 Labs, a tech company focused on AI technology and the development of several projects with leading IT companies. Here I am working as a QA Automation Engineer focusing on unit testing and code maintenance.

Education

Bachelor's Degree in Computer Engineering Università Parthenope di Napoli 2019 - now

Naples, IT

Still working on it ;)

Apple Developer Academy - Pier Program 2022 – 2023

San Giovanni, Naples, IT

The pier program is the second year of the Apple Developer Academy where for one year you work on a single project with the same team and apply all the notions and (agile) work methodologies learned in your student year.

My role during this period was to work as a "backend" developer on the project in association with Barefoot International. I joined a project that has been going on for years characterized by a very large codebase and using very old components of Swift because the app needs to be supported even on very old phones.

Apple Developer Academy 2021 – 2022

San Giovanni, Naples, IT

It was a nine-month experience where we studied all aspects of application development and where I specialized in coding. In addition to coding, I also had the opportunity to explore all aspects of app development from process, UI and UX ideation to implementation.

iOS Foundation Program - Advanced course (Università Parthenope) 2020

Remote

It was a two-month experience where we delved into application development also for tvOS and watchOS.

iOS Foundation Program - Base course (Università Parthenope) 2020

Villa Doria d'Angri, Naples, IT
